

Our fully sculptured vertical sliders are made to the same high standards as the rest of our product range. You can specify an attractive, versatile range of hardware, including Secured by Design fittings for the ultimate in protection.

Quick release pivot arms make installation easy, while energy-efficient glazing of up to 28mm enables you to achieve an impressive A rating. You can order our vertical sliders either with or without sash horns on the top sash. We also offer two options for the bottom sash - either a four-sided fully welded design or a three-sided format with mechanical coupled deep bottom rail.

Furniture and Gearing

All our vertical sliding windows use industry-leading Veka profiles. We use Caldwell 820 series handles and gearing as standard with bespoke, pre-tensioned balances for every frame. We also offer Secure by Design fittings for customers seeking a maximum security solution.

Secured by Design

Our involvement in the commercial market has led us to develop a range of products that meet the gruelling Secured by Design standards, an initiative developed by the Police. With their toughened screws, thicker gauge steel and corner reinforcements, these super-sturdy frames really are significantly stronger than standard frames. They're tested to withstand thousands of Newtons of force, making them tough enough to make even the most persistent thief look for another target.
